

IES Consolidator: Reports

Purpose

The purpose of this Document is to make the point that Report Writing and Report Execution in the Consolidator is the same as in other IES Business DataMarts.

Introduction

The IES Consolidator DataMart is a Business DataMart like any other, except that it is flagged to allowed Consolidations. The main Consolidator options include a direct link to the Document Writer, but all the other Report Writers are supported as well. Also, the main Consolidator options include a convenient 'local list' of Reports flagged for Consolidator.

Consolidator Report Options

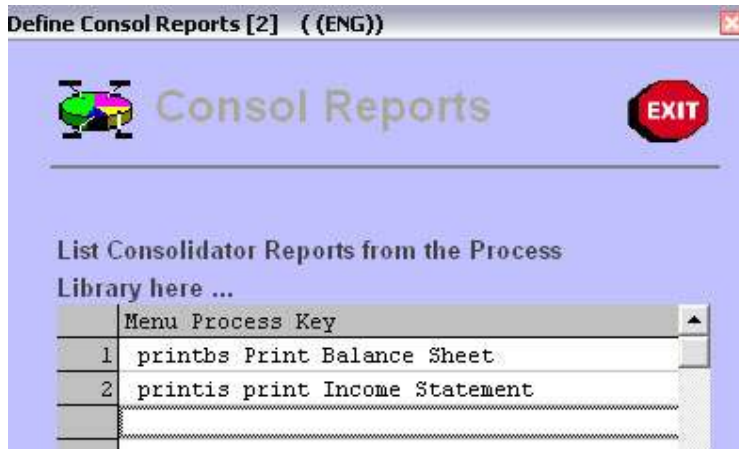

The main Consolidator Report options are shown below. Option "K" opens the Document Writer, and if another Report Writer is required, just switch to the appropriate Business Module.

Option "L" provides a maintenance option for the 'local' list of Report Options for Consolidator, and any Reports from the Process Library may be listed here.

IES Consolidator: Reports

Just list all the Reports for Consolidator here, and then they are easy to select for execution at any time while working in the Consolidator Module.

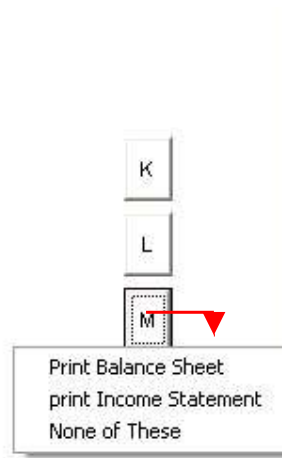

When option "M" is chosen, then the "local Reports" are listed for easy selection.

Reporting: -

- Design and Maintain Reports
- Maintain Report Options List
- Execute Reports
- Consolidation Trace

In addition to the above, the Report Warehouse is of course, as usual, available with a simple right-click.
